Schedule

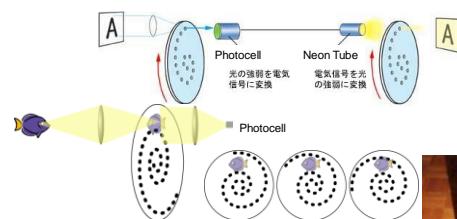

- 10/ 8 Lecture
- 10/15 Lecture
- **10/22 (Conference & Athletic Festival)**
- 10/29 Lecture
- 11/ 5 Lecture
- 11/12 Lecture ***Changed!!**
- **11/19 (Chofu-Sai)**
- **11/26 (Conference)**
- **12/ 3 Mini Test**
- 12/10 Lecture
- 12/17 Lecture
- **12/24 (Conference)**
- 1/ 7 Special Lecture
- 1/14 Lecture
- 1/21 Lecture
- **1/28 Mini Test**
- **2/ 4 (Conference)**

Outline

1. 人間計測手法／Measuring Human
2. 視覚／Human Vision System
3. 視覚センシング／Visual Sensing
- 4. 視覚ディスプレイ／Visual Display**
5. 小テスト／Mini Test
6. 聴覚、聴覚インターフェース／Auditory Interface
7. 触覚、触覚インターフェース／Tactile Interface
8. 力覚、力覚インターフェース／Haptic Interface
9. 移動感覚インターフェース／Locomotion Interface
10. 最新のインターフェース研究／Recent Research
11. 小テスト／Mini Test

Mechanical - Mechanical

1877 Proposed Mechanical Scanning

1884 Invented Circular Mechanical Scanner

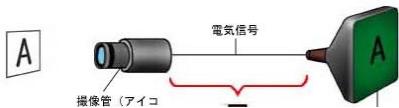

1925 Mechanical TV system was achieved

1897 Cathode-ray tube (CRT) was invented

1911 Cathode-ray tube was used to display a simple image.

Electrical - Electrical

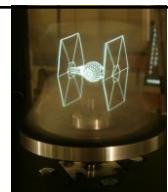

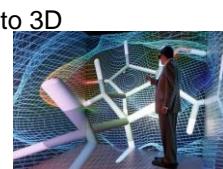

1927 All electrical system was achieved.

1929 BBC starts experimental TV broadcast.

1935 Germany starts first periodical TV broadcast, and was used for Berlin Olympics

From 2D to 3D

- 3D: **奥行きの提示**
Stereoscope display can present **Depth**
- =自己と対象の**距離**の提示
Distance between image and myself is perceivable.
- つまり3Dディスプレイは対象を映すばかりでなく、自己を含んだ系を完成させる
The image is not only **a thing to view and appreciate**, but it becomes **a world in which "I" myself am included**.

TODAY's TOPIC

- 3Dディスプレイ／3D Display

- HMD

- HMDとカメラ／HMD & Camera
- HMDとAR／HMD & AR

- 環境型／Environmental Display

- メガネあり／With Eyeglasses
- 環境型とカメラ／Environmental Display & Camera
- メガネなし／Without Eyeglasses
- 左右の目に違う映像を入れる／Input Different Images to Two Eyes
- ポリュームetricな再構成／Volumetric Reconstruction
- 光線群の制御による多視点映像／Ray Reconstruction
- 錯覚を利用する／Using Illusion

- その他の話題

- 光線群制御からCSCWへ／From Ray Control to CSCW

- 光線群視点制御から視線制御へ／From Ray Control to Eye Control

Two types of 3D displays

- HMD／Head Mounted Display
- 設置型／Ground-Fixed Display

Seems not so different?? It is very, very different.

インタラクティブ技術特論

Head Mounted Display (HMD)

- Sutherland "The Ultimate Display" (1965)

インタラクティブ技術特論

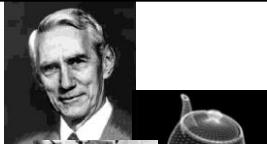

The Ultimate Display (Sutherland 1965)

- We live in a physical world whose properties we have come to know well through long familiarity. We sense an involvement with this physical world which gives us the ability to predict its properties well. For example, we can predict where objects will fall, how well known shapes look from other angles, and how much force is required to push objects against friction. We lack corresponding familiarity with the forces on charged particles, forces in non-uniform fields, the effects of nonprojective geometric transformations, and high-inertia, low-friction motion. A display connected to a digital computer gives us a chance to gain familiarity with concepts not realizable in the physical world. It is a looking glass into a mathematical wonderland.
- The ultimate display would, of course, be a room within which the computer can control the existence of matter. A chair displayed in such a room would be good enough to sit in. Handcuffs displayed in such a room would be confining, and a bullet displayed in such a room would be fatal. With appropriate programming such a display could literally be the Wonderland into which Alice walked.

インタラクティブ技術特論

師匠と弟子 Master and Apprentice

- C. E. Shannon
Father of Information Theory
(Have you heard of "Entropy")?

- Apprentice

- Ivan Sutherland
Father of Computer Graphics, and Father of Virtual Reality
Invented most part of fundamental CG technique, and the first HMD

- Grand-Apprentice

- Jim Clark: Founder of SGI and Netscape
- Alan Kay: Proposed the notion of personal computer "Dynabook"

インタラクティブ技術特論

HMDは虫眼鏡／HMD as a magnifying glass

- 両眼に異なる映像

Two separate images are displayed to each eye.

- 頭部位置計測必須

Head position is tracked by,
Mechanical Link,
Gyro
Acceleration Sensor
Magnetic Sensor
etc...

- 虫眼鏡光学系で距離を稼ぐ

"Magnifying glass" optics is used to keep distance between eye and image.

TODAY's TOPIC

- 3Dディスプレイ／3D Display

- HMD
 - HMDとカメラ／HMD & Camera
 - HMDとAR／HMD & AR

- 環境型／Environmental Display

- メガネあり／With Eyeglasses
 - 環境型とカメラ／Environmental Display & Camera
 - メガネなし／Without Eyeglasses
 - 左右の目に違う映像を入れる／Input Different Images to Two Eyes
 - ボリュームetricな再構成／Volumetric Reconstruction
 - 光線群の制御による多視点映像／Ray Reconstruction
 - 錯覚を利用する／Using Illusion

- その他の話題

- 光線群制御からCSCWへ／From Ray Control to CSCW
- 光線群視点制御から視線制御へ／From Ray Control to Eye Control

HMD用のカメラとは？／Camera for HMD?

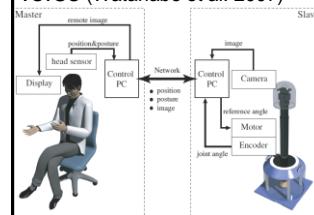

- Two cameras, which are at the same position as the HMD are used.

[インタラクティブ技術特論](#)

TELESAR (Tachi et al., 1989)

TORSO (Watanabe et al. 2007)

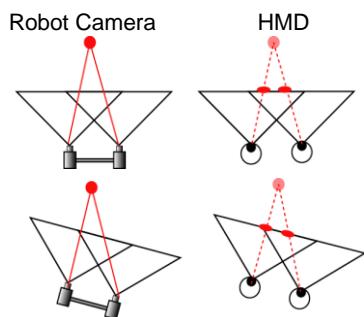

Torso (Watanabe et al. 2007)

TORSO

Completion of
egocentric telegnosis system

[http://tachilab.org/modules/projects/torso.html](#)

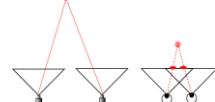

頭部回転？問題なし
Head Rotation? No problem!!

Seems obvious??

その他の注意点(1)眼間距離と視野角の問題 Other concerns(1) Eye distance & view angle

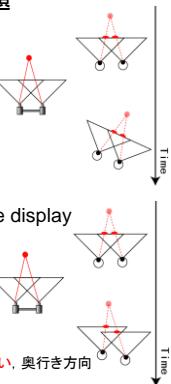

- 眼間距離(カメラ間距離)の不一致:両眼立体視を行うと自分が巨人or小人になったかのような感覚。(立体視おもちゃの「箱庭感」)
Difference of eye distances generate odd size feeling (miniature garden)

- 視野角の不一致/Difference of viewing angle
 - 奥行きがおかしくなる。Distance is changed
 - 頭部回転運動の際、正面の物体が観察者の頭にくついて動くか、逆方向に流れる。When head rotates, objects "move".
 - 眼鏡を初めてかけたときの違和感

その他の注意点(2)時間遅れの問題 Other concerns(2) Time Latency

- 頭の動きから描画までに時間遅れ.
Latency between head motion and image display
- 首を振ったとき When the head rotates:
 - HMD:
 - 画像が首の回転に付いてくる
The image moves
 - 設置型 Ground fixed display:
 - 画像は付いてこない。しかし立体視に関しては狂い、奥行き方向にひずみを生じる。
The image does not move, but distort.

HMDの利点と欠点／Pros & Cons of HMD

- 行動範囲が広い／Users can walk freely
- 自分の体を隠せるため自己投射性が高くなる。時間遅れ、座標ずれに対してロバストに／Users can hide their bodies, meaning they can "deceive" themselves. Becomes robust to latency and coordinate distortion
- 遠隔ロボット(カメラ)との相性が良い／Easy to design distance robot camera.
- 装着するので重い、閉塞感／Heavy and feeling of being caged
- 顔が隠されるため双方向コミュニケーションには不向き／Face is hidden, meaning two way communication is difficult.
- 視野角を大きくとる設計が難しい／Design of large field of view is quite difficult.

TODAY's TOPIC

- 3Dディスプレイ／3D Display
 - HMD
 - HMDとカメラ／HMD & Camera
 - HMDとAR／HMD & AR
 - 環境型／Environmental Display
 - メガネあり／With Eyeglasses
 - 環境型とカメラ／Environmental Display & Camera
 - メガネなし／Without Eyeglasses
 - 左右の目に違う映像を入れる／Input Different Images to Two Eyes
 - ボリュームetricな再構成／Volumetric Reconstruction
 - 光線群の制御による多視点映像／Ray Reconstruction
 - 錯覚を利用する／Using Illusion
 - その他の話題
 - 光線群制御からCSCWへ／From Ray Control to CSCW
 - 光線群視点制御から視線制御へ／From Ray Control to Eye Control

Augmented Reality (AR) and See-Through HMD

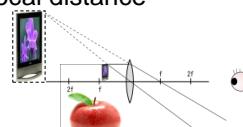

- Overlap CG image and the real world
 - ビデオシースルー／Video See-Through: Capture the real world by camera.
 - オプティカルシースルー／Optical See-Through: use half-mirror & optically overlap

See-Through HMD (video see-through)

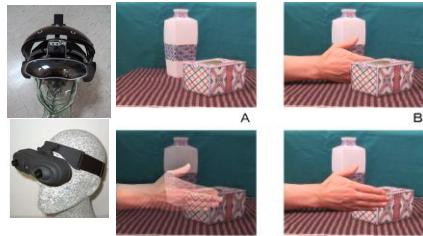

ARの問題(1)焦点調節 Problem of AR (1) Focal distance

- HMD像: 結像位置が決まっている
HMD image is always at the same distance.
- 実世界の物体: 距離はまちまち
Distance of real world object is arbitrary
- 両方を同時にクリアに見ることができない
User can't clearly observe the two simultaneously.
- ビデオシースルーでは問題にならないが、焦点深度の深いカメラが必要で実世界とは違ってくる
Video see-through partially solved the problem, but the real world image is different due to large depth camera.

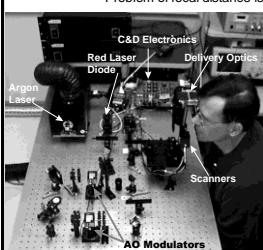

ARの問題(2)遮蔽 Problem of AR(2) Occlusion

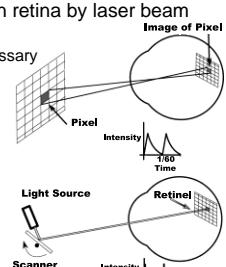

- (A) 通常のHMD. Ordinary HMD
(B)理想的な遮蔽状態. Ideal occlusion
(C)See-Through HMD.
(D)設置型／Ground fixed display.

網膜書き込み型HMD Retina scan display

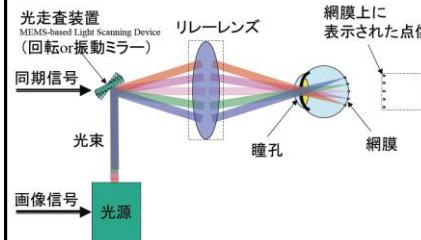

- Washington university, HIT Lab('99)
- レーザ光線による網膜書き込み Scan retina by laser beam
 - 眼球のレンズによる結像が不要
Image focus by the eye lens is unnecessary
 - Problem of focal distance is solved.

<http://www.hitl.washington.edu/projects/vrd/>

ブラザー工業の網膜走査ディスプレイ Retina Scan display by Brother Inc.

http://www.3dc.gr.jp/jp/act_rep/090612/Sato.pdf

ブラザー工業の網膜走査ディスプレイ Retina scan display by Brother Inc.

<http://www.youtube.com/watch?v=OIAZpmaYic8>

再帰性反射材を用いた頭部搭載プロジェクタ Head Mounted Projector by Retroreflector

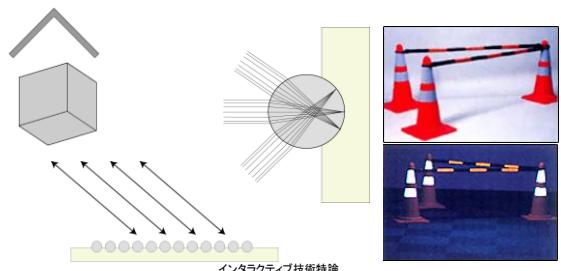

<http://projects.tachilab.org/rpt/>

再帰性反射材

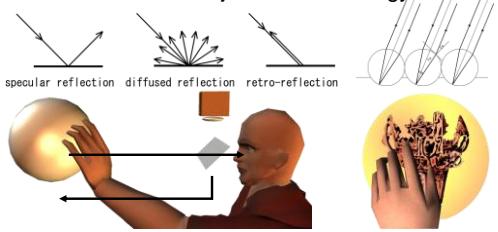

What is retro-reflector?

- Glass balls with index of refraction=2
- Or, Cube type (Corner Cube)
- Any incident beams will come back to the same direction.

インタラクティブ技術特論

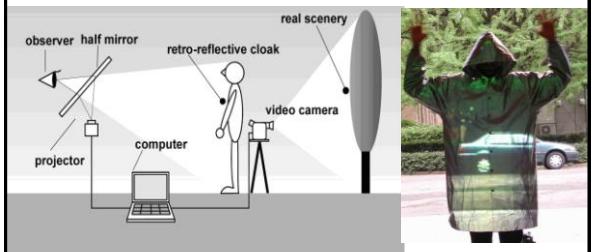

RPT: Retro-reflective Projection Technology

- Use retroreflector and projector
- Problem of focal distance is solved.
- Problem of occlusion is solved.
- Stereoscopic image can be presented

Optical Camouflage by RPT (Inami et al.)

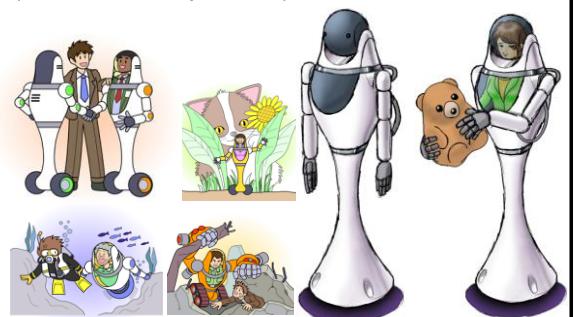

<http://www.star.t.u-tokyo.ac.jp/projects/MEDIA/xv/oc-j.html>

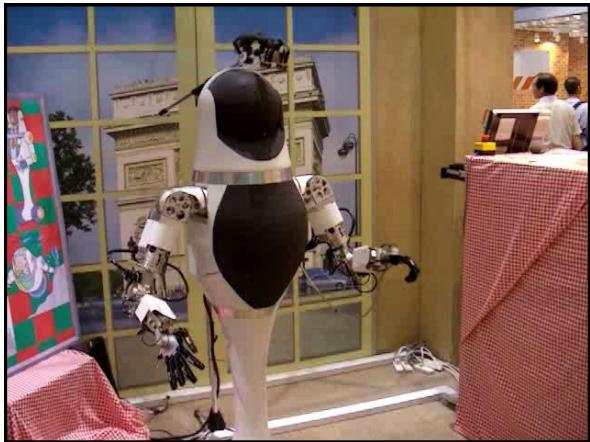

Robot surface becomes screen.

(Aichi World Expo 2005)

インタラクティブ技術特論

TODAY's TOPIC

• 3Dディスプレイ／3D Display

- HMD

- HMDとカメラ／HMD & Camera

- HMDとAR／HMD & AR

- 環境型／Environmental Display

- メガネあり／With Eyeglasses

- 環境型とカメラ／Environmental Display & Camera

- メガネなし／Without Eyeglasses

- 左右の目に違う映像を入れる／Input Different Images to Two Eyes

- ボリュームetricな再構成／Volumetric Reconstruction

- 光線群の制御による多視点映像／Ray Reconstruction

- 錯覚を利用する／Using Illusion

• その他の話題

- 光線群制御からCSCWへ／From Ray Control to CSCW

- 光線群視点制御から視線制御へ／From Ray Control to Eye Control

Two types of 3D displays

- HMD／Head Mounted Display
- 設置型／Ground-Fixed Display

Seems not so different?? It is very, very different.

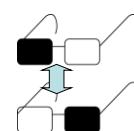

Ground Fixed Display

- Some sort of "Filter" is necessary to display separate image to each eyes.

- By using projectors, surrounding display possible
(IPT: Immersive Projection Technology)

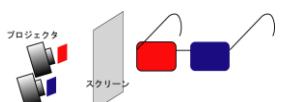

インタラクティブ技術特論

Filter (1) Color Filter

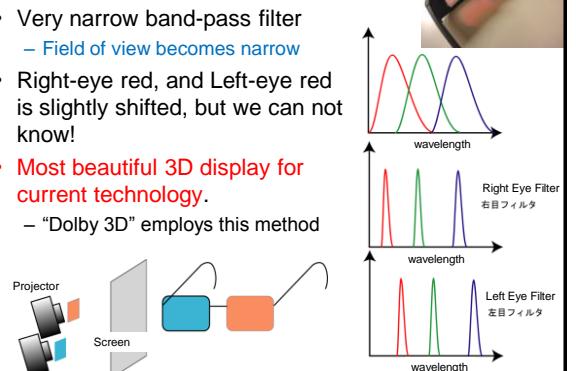

- Red cellophane and Blue cellophane. That's it.
– \$\$Cheap!\$\$
– Color is strange.

Filter (1.5) Full-color "color filter"

- Very narrow band-pass filter
– Field of view becomes narrow
- Right-eye red, and Left-eye red is slightly shifted, but we can not know!
- Most beautiful 3D display for current technology.
– "Dolby 3D" employs this method

Filter (2) Polarization Filter

- Horizontally polarized light can not pass through vertical polarizer, and vice-versa.
- Cheap and color is OK.
- Circular polarization is used for tilt robustness.

Filter (3) Time-multiplexing

- High speed "LCD shutters" are put on each eyes.
- At one flame, only one eye can see.
- The refresh rate becomes half.
Quite high fps display is necessary (\times LCD OCRT)
- Many people can observe different image
(image becomes darker and fps becomes lower, though)

AVATAR(2009)

- いくつかの方式で同時上映された
 - XpanD: Time multiplexing
 - RealD: Polarization filter (circular)
 - Dolby3D: Full color "color filter"
 - IMAX3D: Polarization filter (linear)
- <http://itsa.blog.so-net.ne.jp/2010-01-15>
- 3Dの「字幕」問題を認識させた: ARの問題に等しい
Showed problem of "caption": Equal to AR problem

XpanD RealD Dolby3D IMAX3D

 - 光線群視点制御から視線制御へ／From Ray Control to Eye Control

TWISTER: Use Moving Parallax Barrier

The diagram illustrates the TWISTER system. On the left, a schematic shows two LED arrays (one for each eye) positioned behind a vertical parallax barrier. On the right, a circular diagram shows the field of view of two eyes, divided into four quadrants by the barrier. The top-left quadrant is red, the top-right is blue, the bottom-left is purple, and the bottom-right is white.

- Left and Right eye receive different LED light by the barrier.
- Rotates very fast, and the barrier “vanishes”

<http://projects.tachilab.org/TWISTER/>

Volumetric Representation

- Rotate or vibrate the screen or mirror
- “Cross-section” image is projected according to the motion.

The diagram shows a complex optical setup with labels: Rotating Inner Dome (Outer Dome not shown), Projection Screen, Relens Optics, 600 nm Projection Lamp, and Application System and Graphics Memory. To the right is a photograph of a volumetric display device projecting a 3D image of a human head.

インターラクティブ技術特論

Volumetric representation by layered LCDs

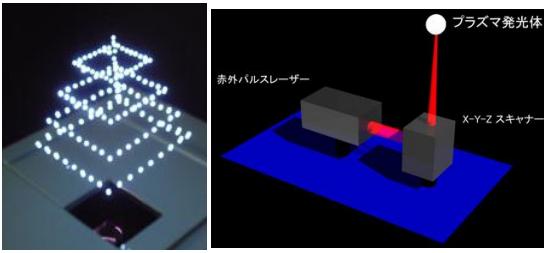

- LightScape Technologies DepthCube Z1024
- スクリーンの役割をする液晶スキヤッタリング・シャッター20枚。DLPプロジェクターで背面投影。
20 LCD shutters are stacked as layered screen.
- 20枚の内、常に1枚だけシャッターが閉じる。高速にスクリーンが動くのと等価。
One shutter works at a time, equivalent to moving screen.

The diagrams show a cross-section of a layered LCD screen with 20 shutters and a projector casting light onto it. To the right is a photograph of a computer monitor displaying a 3D image.

インターラクティブ技術特論

プラズマディスプレイ／Plasma display

- 赤外レーザービームを空間中にフォーカスし、空気をプラズマ化して発光させる Focused IR Laser beam generates plasma light spot

TODAY's TOPIC

• 3Dディスプレイ／3D Display

– HMD

- HMDとカメラ／HMD & Camera
- HMDとAR／HMD & AR

– 環境型／Environmental Display

- メガネあり／With Eyeglasses

- 環境型とカメラ／Environmental Display & Camera

- メガネなし／Without Eyeglasses

– 左右の目に違う映像を入れる／Input Different Images to Two Eyes

– ボリューメトリックな再構成／Volumetric Reconstruction

– 光線群の制御による多視点映像／Ray Reconstruction

– 錯覚を利用する／Using Illusion

• その他の話題

– 光線群制御からCSCWへ／From Ray Control to CSCW

– 光線群視点制御から視線制御へ／From Ray Control to Eye Control

Is 3D display really necessary?

• Maybe not

– Yet too expensive, and contents are limited.

– To “observe” something, resolution is more important than 3D. (You can observe with single eye!)

• However,

– To handwork in a virtual space, “distance” perception between myself and the CG object is critically important.

インタラクティブ技術特論

空中像による錯覚／Illusion by floating image

- 空中に(他の支えが無く)映像が浮いている場合、人は勝手に「立体的」と判断する

When the image is floating in the air without anchorage, we feel it as 3D

タラクティブ技術特論

Fog Screen

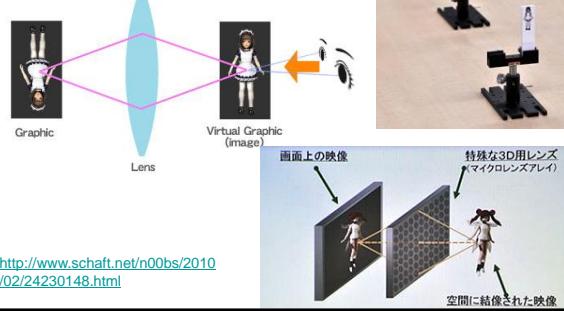

<http://www.fogscreen.com/>

フローティングビジョン

Floating Vision (パioneer, 2008)

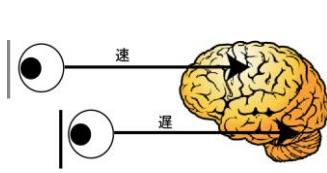

一つの凸レンズにより結像した実像を観察
glasses-free small 3 D display basic structure test.

フローティングビジョン (パioneer, 2008)

プルフリッヒ効果／Pulfrich Effect

- 両目の濃度が違うサングラスをかけて見る
Put eyeglasses with two different darkness for each eye
- 明るさの違いによって脳への視覚情報伝達に時間差を生じる。
Different brightness generates temporal difference
- 動画の横の動きによって視差が生じ、奥行きが体感される
Horizontal motion of the movie causes disparity, generates 3D feeling

というわけで
